JUNE GREENS UPDATE

- GOLF COURSE UPDATE
 - I am pretty happy with the health of the turf after getting thru most of the month of June! May was exceptionally wet but the past 2 weeks we finally were able to dry up some.
 - All stakes markings recently removed trees were removed, the grass in these areas is not yet mature and will take some more time to fill in, these areas can still be played as GUR.
 - Staff is at an all-time high of 15 hourly employees! Even though the bulk of them only being available until September it's still great to have the help, and I hope it will show on the golf course.
- Putting Green Update
 - Our new putting green is about 1 month old. Multiple rain events directly following seeding delayed the germination but I am happy with the status of the grass that has started to grow so far. I believe we are on pace to open if for the Men's invite, with the potential of having to close it again for recovery after the event if necessary.
- Native Establishment
 - The first week of this month our newly seeded areas on 1/17/18 and 12 were seeded with Fine Fescue. This grass is coming in nicely but is a slow maturing grass and will not give us the seed head look we want until next season.
- New Business
 - Remove Native #13?
 - Addition of Aneuw Plant growth regulator to greens program.

Anuew™
PLANT GROWTH REGULATOR

MANAGE TURFGRASS GROWTH, IMPROVE QUALITY AND APPEARANCE.

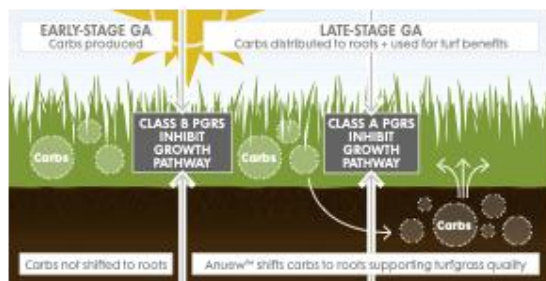

Anuew™ is a proven plant growth regulator breakthrough, saving superintendents time with less mowing and fewer clippings while improving the overall playability of greens, tees and fairways. Labeled for cool- and warm-season turf management, Anuew is a late-stage inhibitor with a novel mode of action that can be used on all managed turf areas to improve turfgrass quality, density and appearance. Anuew is more active and longer lasting than other late-stage growth regulators on cool-season turf, providing more regulation activity at lower doses. It is also the only PGR that can evenly regulate Poa in mixed stands.

COMPETITIVE ADVANTAGES

- More active and longer lasting on cool-season turf
- Faster regulation in warm-season turf
- Helps evenly regulate Poa in mixed stands
- Improves appearance and playability on greens with bermudagrass mutations
- Supports seedhead suppression
- First EPA-approved label with Growing Degree Day (GDD) application modeling

HOW CAN I BENEFIT FROM A LATE-STAGE INHIBITOR?

Unlike early-stage inhibitors, Anuew shifts carbohydrates to the plant roots to visibly improve turfgrass quality, density and appearance.

AT-A-GLANCE INFO

EPA REG. NO 1001-91
ACTIVE INGR. prohexadione calcium [2.75%]
FORMULATION extruded granule
CHEM. FAMILY acylcyclohexadiones
SIGNAL WORD caution
RESTRICTED no
PACKAGE SIZE 4 x 4 x 1.5 lb resealable pouch
