AUGUST GREENS UPDATE

- **GOLF COURSE UPDATE**

- Very wet conditions have remained the normal again for the month of August so far, leaving the course softer than desired but also very green. Please continue to fill divots and repair ball marks as you have been doing a great job of all season!
- Repairs have been made to some bunker edges and other worn-out areas like on 11,12, 14, 15 and 16. Please do your best to stay off these areas with cart traffic and foot traffic in the future so we can avoid repairing them again. We will continue this process as needed to make sure all worn areas are eventually addressed.
- We have begun the next phase of our master plan to install more low-cut bent/poa around 18 tee +fairway...and to also expand 18 tee surface itself.

In this process we have eliminated the old practice bunker and green, using that soil to create the new tee and regrade the land. We will be using existing unused fairway grass from #1 for the expansion of the short grass areas for this project. Leaving only the need to purchase a few thousand square feet of Fescue or Bluegrass sod to complete to project.

- **New Business**

- Introduction of wooden rakes. Stain? Installation date?
- Aerification of greens and tees, and fairway verticutting planned to start September 5th!
